MOTIVATION

This material explains the navigation in the SAP S/4HANA system with the SAP Fiori apps. It is aimed primarily at students from universities, colleges, vocational schools, and other educational institutions with no prior knowledge of SAP Fiori. It can be used for both frontal teaching and as a self-learning unit.

After completing the course, students will be able to navigate SAP Fiori user interfaces to handle processes or exercises independently.

This course can also be used as a reference for occasional users.

LEARNING METHOD

To process this case study, a user account for SAP S/4HANA is required.

The delivery method used is guided learning. Since SAP navigation on the one hand is basic knowledge and skills, but on the other hand it is also very extensive, this learning method is suitable.

The advantage of the learning method is not only the rapid transfer of expertise, but also the ability to act. Graphical formatting is used to explain a process or procedure to the learner in detail, similar to a case study.

Exercises are used to practically apply learned knowledge and consolidate it sustainably.

Step 1: Log on to SAP S/4HANA

Task Learn how to log on to the SAP S/4HANA Fiori launchpad. **Time** 10 min

Open a web browser and use the link provided by your instructor to log on to your SAP S/4HANA.

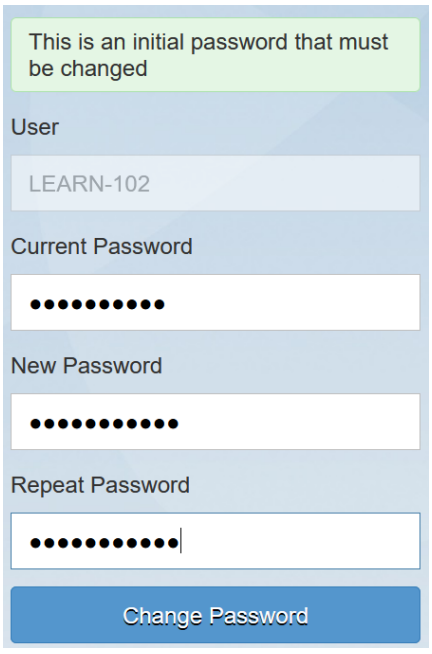

On the logon screen, select your **user name**, your **password**, the **client**, and the language **English**. Then click Sign In.

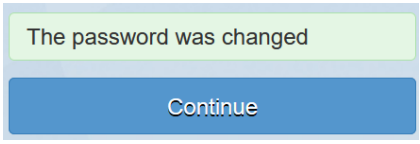

Username
Password
Client
English

After logging in for the first time, you will be asked to change the password. Select a **password of your choice,** confirm it, and then click *Change Password*.

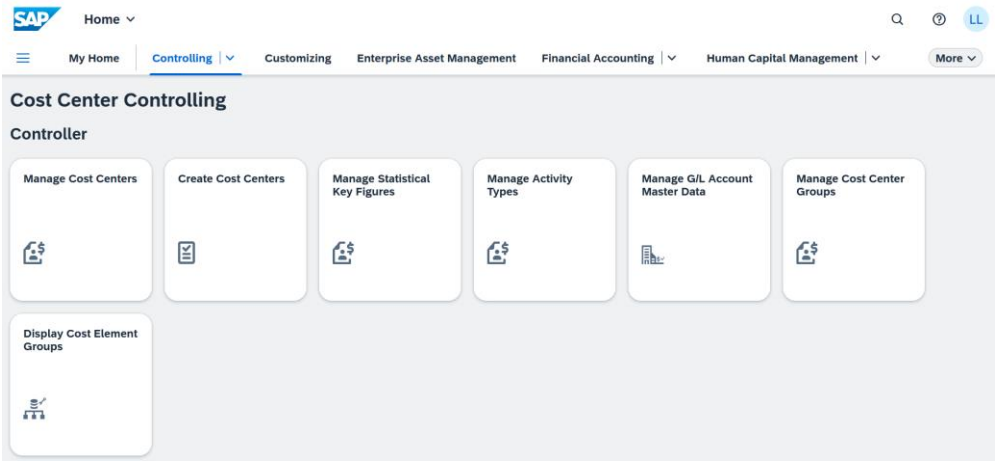

Password of your choice

Click **Continue** to confirm the password change. This takes you to the SAP S/4HANA home page, which is called the SAP Fiori launchpad. The launchpad shows all available SAP Fiori apps and is the starting point for all actions. The SAP Fiori apps are displayed as square tiles and are grouped into the business processes of a company. In addition, the launchpad has a search function for general search queries or to find other SAP Fiori apps.

Continue

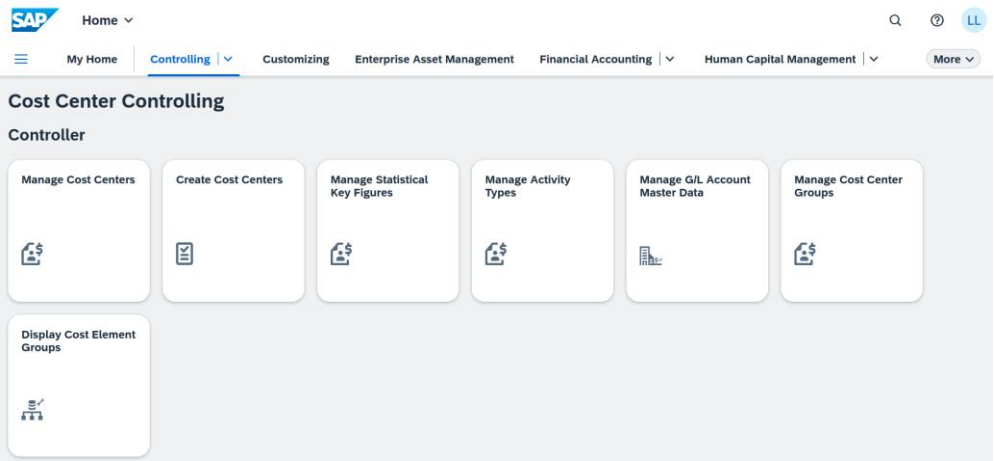

Step 2: Organization and Structure of the Launchpad

Task Familiarize yourself with the individual spaces and elements of the launchpad. **Time** 10min

Local Layout

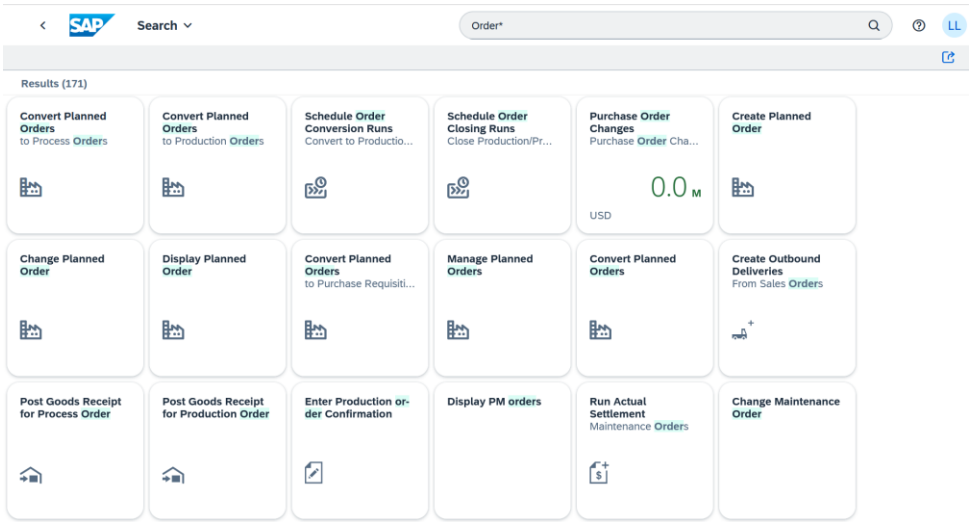

On the SAP Fiori launchpad, there is a search function at the top, as well as the profile button LL.

The search function allows you to find specific SAP Fiori apps. As a result of this function, transaction codes are no longer required in SAP S/4HANA.

Order*

In the search window, enter **Order*** and choose Enter. The * is a wildcard (a placeholder for other characters).

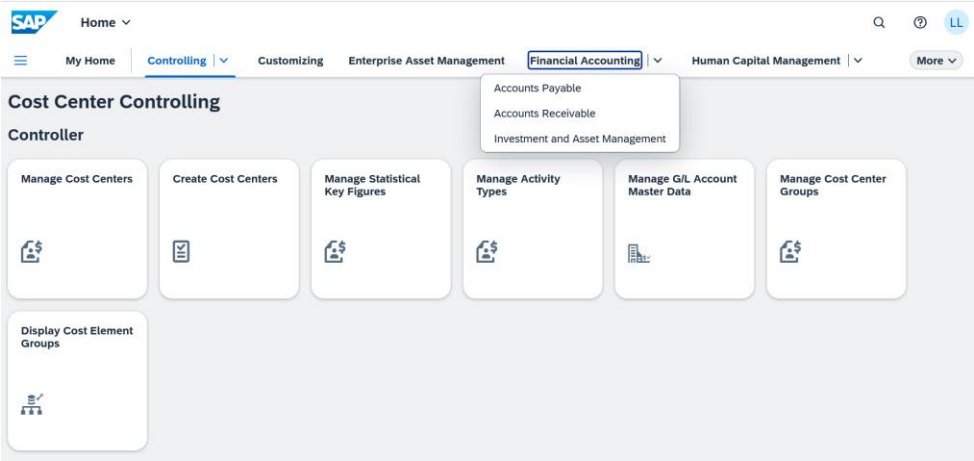

Home button

Click the Home button SAP to return to the SAP Launchpad.

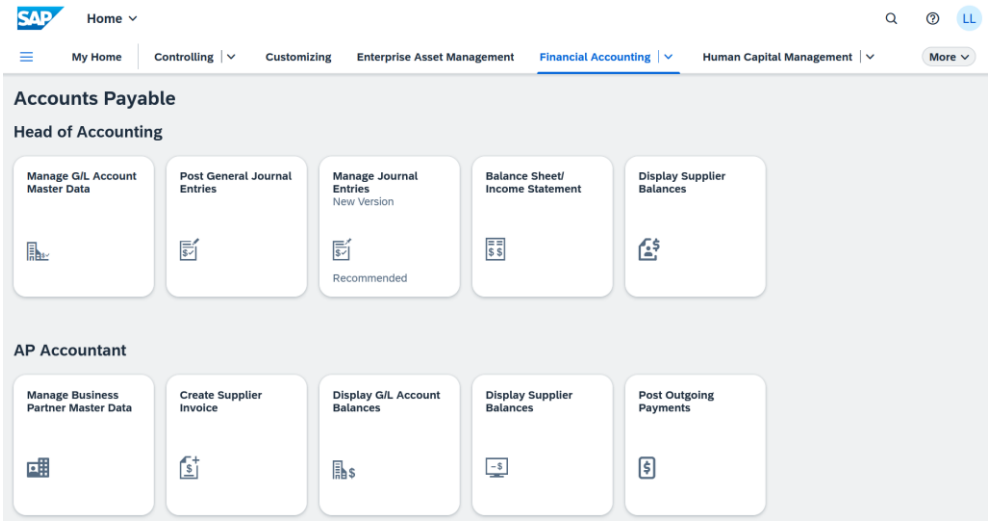

All SAP Fiori apps are arranged in square tiles. Some of these tiles have a display function that, without having to open the app first, displays a preview of the content of the business process.

All SAP Fiori apps are organized in spaces. The spaces are divided into pages and each page has one or more roles below which the apps are shown. To see an overview of all spaces, you can click ⌄ in the upper right area. In your view, there are only as many spaces as you need to complete the exercises and case studies. The number of spaces, pages, and roles available to you may therefore differ from this example.

One space of Fiori apps is the *Financial Accounting* space. There you can, for example, Manage Journal Entries or Display Supplier Balances.

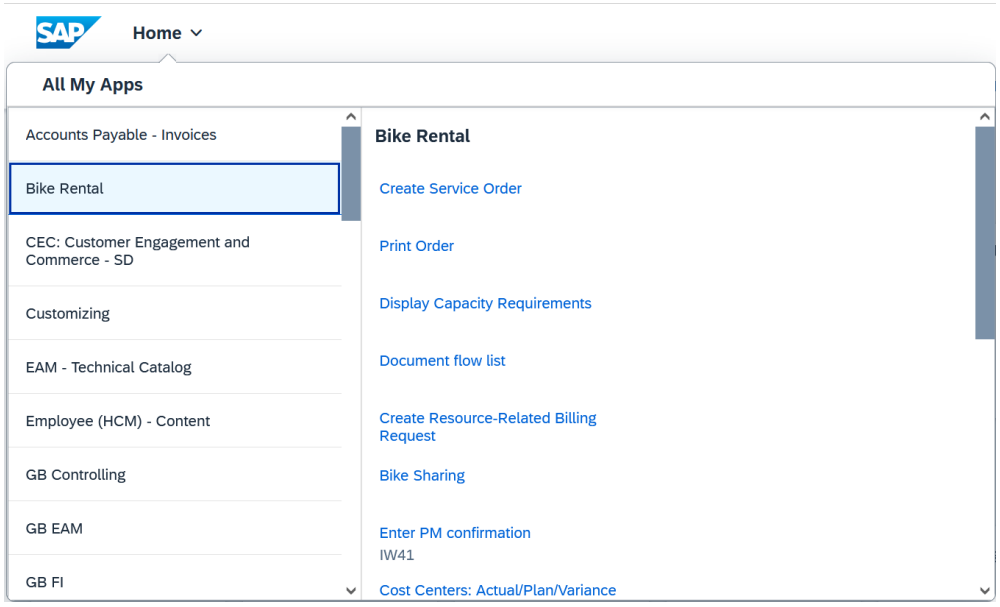

Financial Accounting

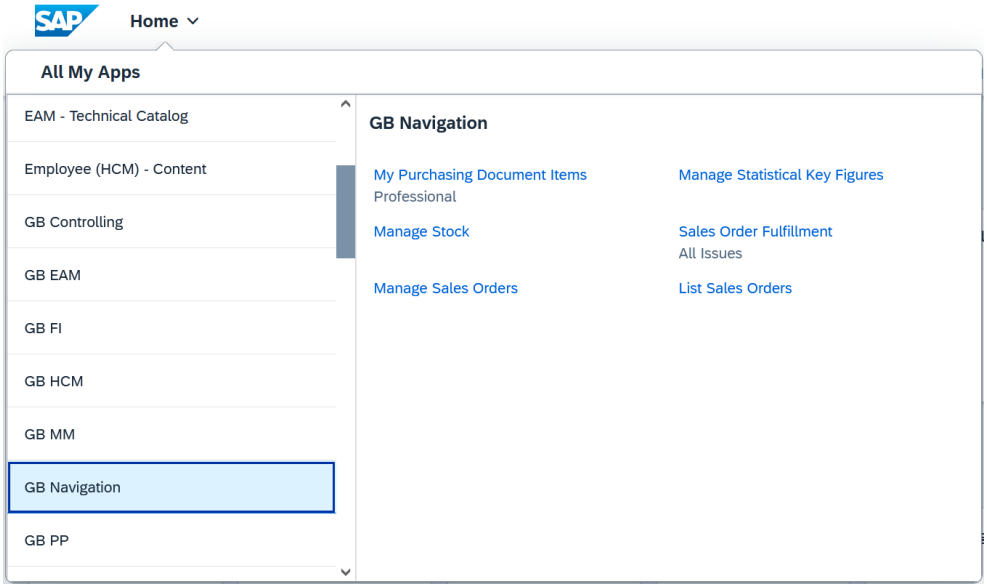

Another way to navigate is the dropdown menu at the top of the launchpad

Click at Home the top of your launchpad.

Home

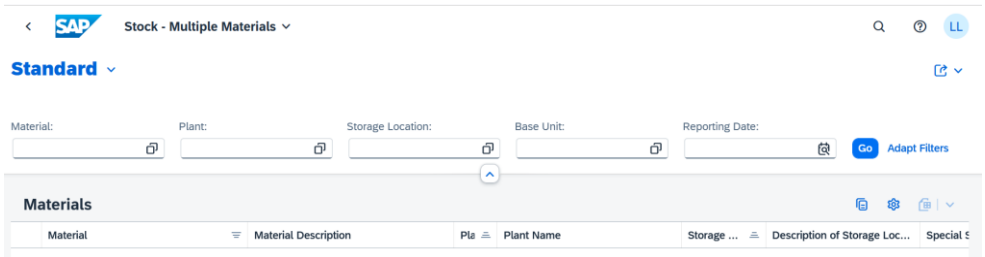

On the left, you see all spaces of your launchpad. On the right are all apps of the selected space.

To close the dialog box again, click either on the start page or outside the dialog box.

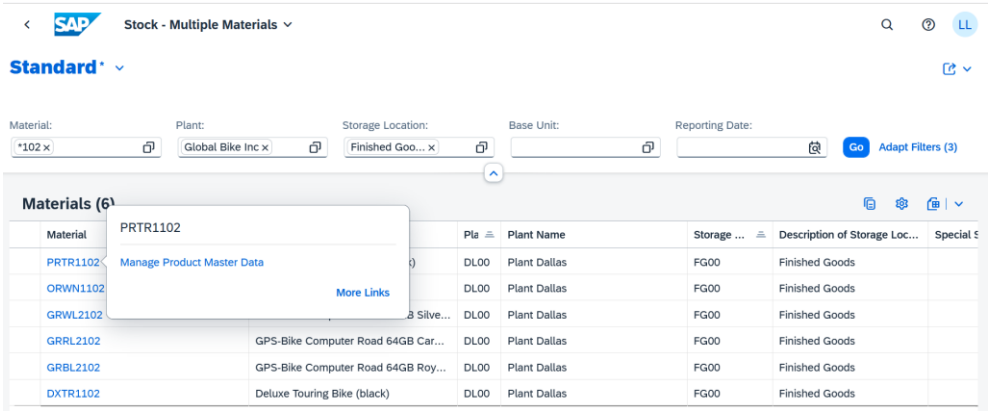

Fiori apps allow you to navigate from the app to another app. Choose the app *Stock – Multiple Materials* within *Sales and Distribution* space.

Stock – Multiple *Materials*

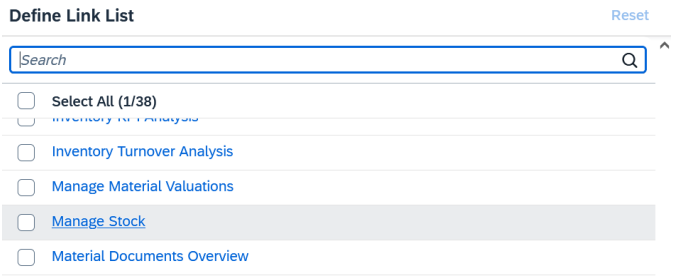

Enter ***###** as the *material number* (replace ### with the last three digits of your user), **DL00** as the *plant*, and **FG00** as the *storage location*. Then press Go. Now click on the material number of the first entry.

*###
DL00
FG00
Go
First Material No.

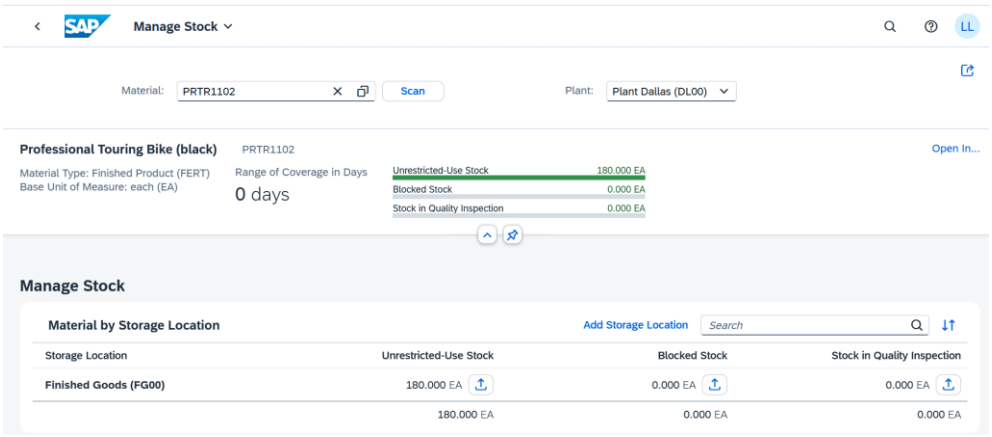

In the window that appears, click More Links .

More Links

In the link list, click on the entry *Manage Stock* to go to the related app.

Manage Stock

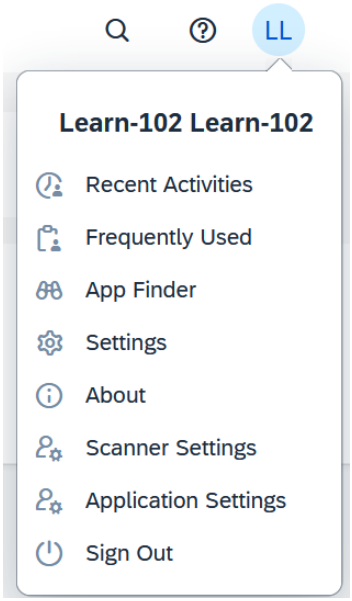

Choose the Home button to return to the SAP Fiori launchpad.

Home button

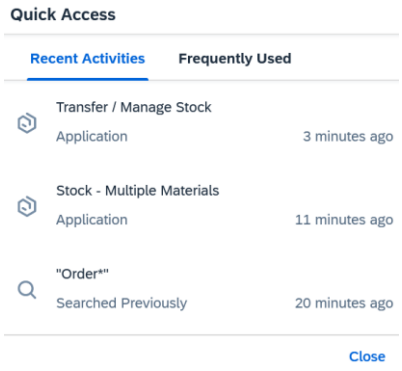

Click to LL open your profile.

Profile

Under the entry *Recent Activities*, you can see the apps that you accessed most recently. Click the *Recent Activities* and *Frequently Used* tab. You will see the dialog shown below, but the listed apps may differ.

Recent Activities
Frequently Used

Click to Close return to the Fiori Launchpad.

Close

Stay in the SAP Fiori launchpad for the next task.

Step 3: Three Types of Fiori Apps on the Launchpad

Task Familiarize yourself with the different SAP Fiori apps. **Time** 15 min

With the SAP S/4HANA Fiori Launchpad, you have the option to access data web-based. Access can be provided by mobile devices, such as tablets or smartphones, as well as by a fixed PC. The SAP Fiori apps provide personalized and faster access to the company's business processes.

The SAP Fiori app system consists of three different types: transaction apps, analytical apps, and fact sheet apps. In addition, some transactions are displayed in WebGUIs.

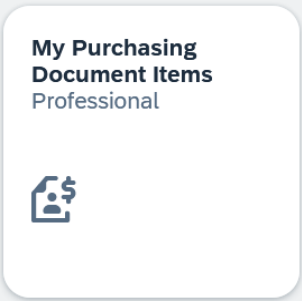

The three types are presented below using examples. You can find the respective apps in one of the spaces or by using the search function .

Transactional apps:

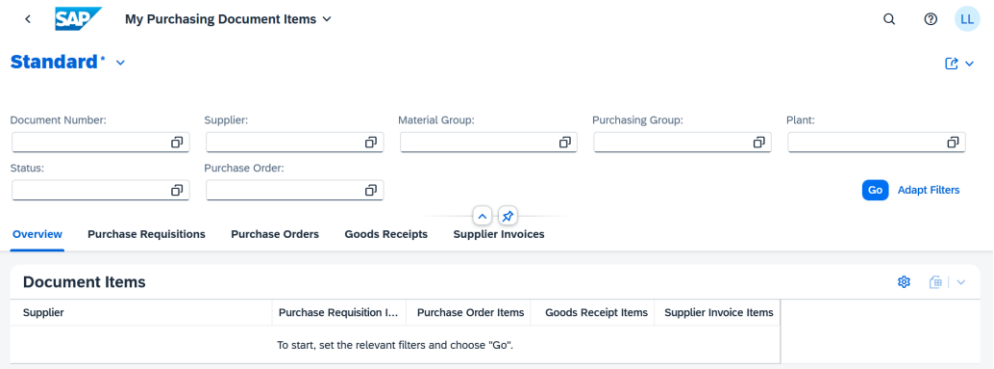

This includes all apps that can be used to execute transactions of a company or manage entire business processes. These include transactions between managing directors and employees, such as vacation approvals and new hires, as well as order confirmations. With transactional apps, you can also handle simple SAP transactions on a mobile device.

An example of a transactional app is *My Purchasing Document Items - Professional* in the space of *Materials Management*.

My Purchasing Document Items

With this app, you can quickly search within a large amount of data that is in your area of responsibility. When searching, the app allows you to set various filters to simplify or narrow down the search.

Choose the Home button SAP to return to the SAP Fiori launchpad.

Home button

Analytical apps:

Analytical apps are used for real-time data analysis of business processes and their clear presentation. Visual overviews and data can be evaluated. In addition, complex calculations and a quick response to changes in the market are possible. Analytical apps combine the capabilities of SAP HANA and the SAP Business Suite and are divided into two types: SMART Business and Virtual Data Models. SAP Fiori SMART business apps represent the key performance indicators (KPIs) in real time and adapt flexibly to changes in the market. You can use the drilldown and filter functions to analyze data from your existing Business Suite system in real time. The SAP Smart Business framework allows you to build apps and helps you manage your business in real time with KPIs. The SAP Smart Business content serves as a template to help you create and consume industry-proven KPIs. Virtual data models prepare the large mass of data without the need for additional software. SAP provides several standard models that can be enhanced.

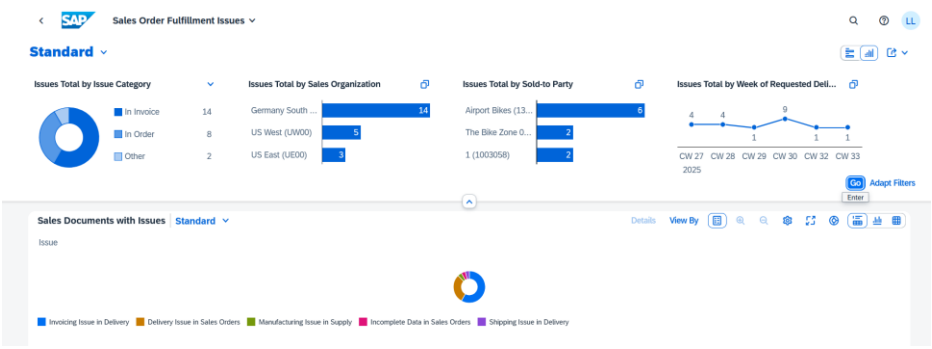

An example of an analytical app is the *Sales Order Fulfillment*.

Sales Order Fulfillment

Click on your profile icon LL in the top right corner, then select the App Finder App Finder. Please wait until the application has fully loaded.

In the left-hand menu, navigate to the section “Sales – Sales order Monitoring and Tracking”. There, select the app *Sales Order Fulfillment*.

The orders are presented in a visual format and can be analyzed based on various criteria. By interacting with the charts, you can access detailed information on individual orders and their respective statuses.

Note that you may see more sales orders. This depends on whether other case studies have already been processed.

Choose the Home button in the upper left corner to return to the SAP Fiori launchpad.

Home button

Another example of analytical apps in the space of *Materials Management* in the role *Goods Receipt Clerk* is the *Manage Stock* app.

Manage Stock

For *material*, enter **DXTR1###** (replace ### with the last three digits of your user, for example 102) and ensure that it is selected for *plant* **Dallas DL00**.

DXTR1###
DL00

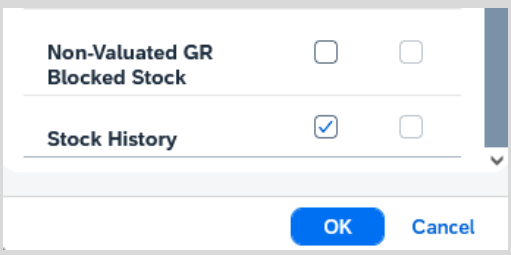

Click Stock - Single Material on the lower part of the screen.

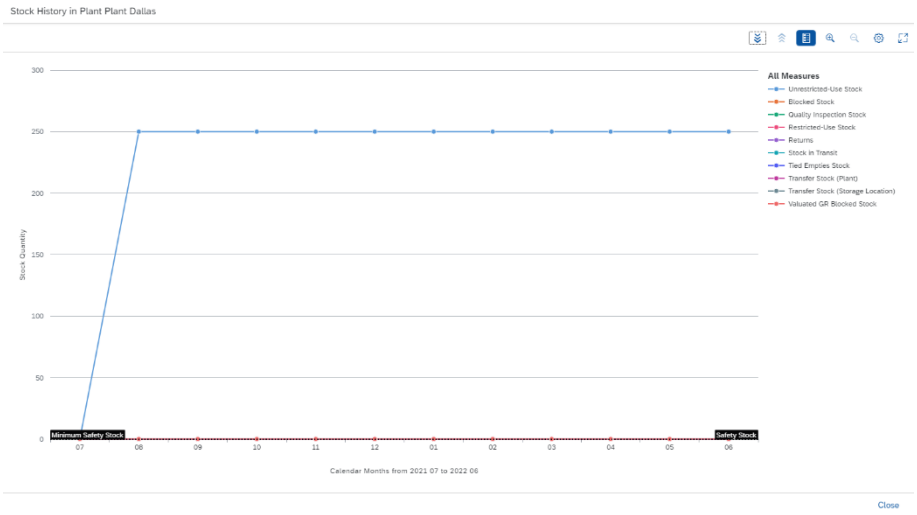

Stock - Single Material

To view the stock history, click the lines below Stock History.

Stock History

Note If you do not see this column, click on the icon and then on the columns icon. Next, look for the *Stock Development* column and check the box next to it. Finally, click OK.

Close the view with the corresponding button (Close).

Close

Click the Home button to return to the SAP Fiori launchpad.

Home button

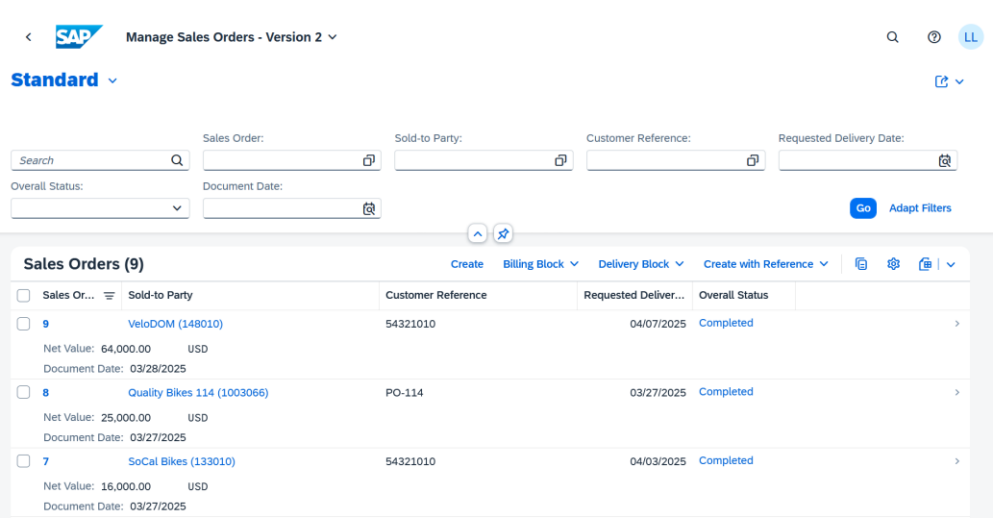

Fact sheet apps:

Fact sheet apps provide key information and facts about key business objectives. In doing so, they make it possible to call up specific company processes in detail and obtain key information. You can also connect to other fact sheet apps and also switch to transaction apps.

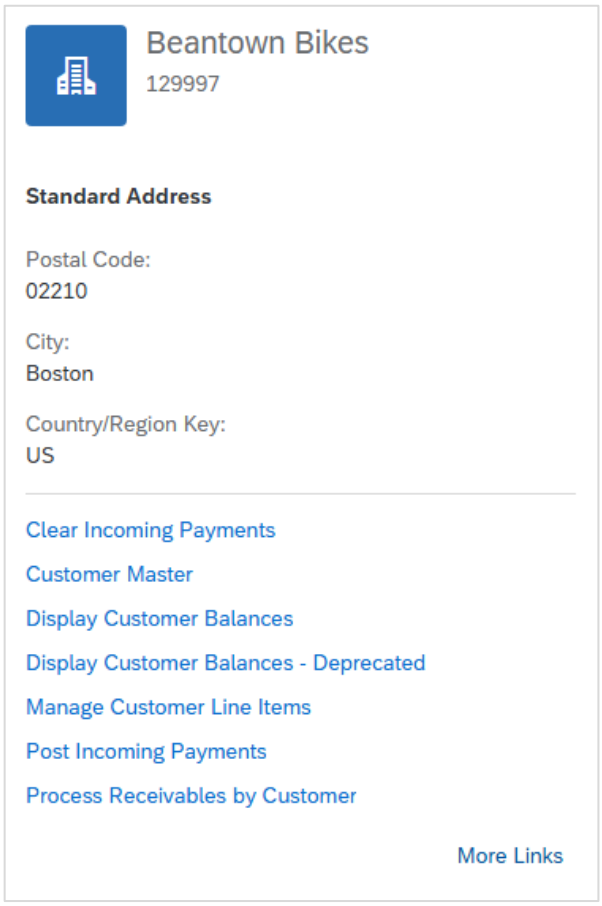

Click on the *Manage Sales Orders – Version 2* app. In the *Manage Sales Orders* window, choose Go.

Manage Sales Orders
Go

Click on the Buyer Beantown Bikes (129997).

Beantown Bikes

You can see information about the customer and navigate to other apps. For example, you can use More Links to open the app *Customer – 360° View*. This is a real factsheet with only one specific data object.

Customer – 360° View

Click the Home button to return to the SAP Fiori launchpad.

Home button

The three apps listed above are divided into dynamic and static apps.

Dynamic Apps

In the space of *Sales and Distribution*, the *Manage Sales Orders – Version 2* app is a dynamic app. Currently, Global Bike has 9 different sales orders. When you create a new sales order, the number increases to 10. You might see a higher number than 9, depending on whether you or other students have already created sales orders.

Manage Sales Orders – Version 2

Choose the Home button to return to the SAP Fiori launchpad.

Home button

Static Apps

The *List Sales Orders* app is a static app. You can use this app to display all sales orders. However, after the search in the launchpad, you do not see in the tile how many sales orders there are currently at Global Bike.

List Sales Orders

Choose the Home button to return to the SAP Fiori launchpad.

Home button

Step 4: Make Settings

Task Learn how to change the settings. **Time** 5 min

Alternative way to perform the Steps 4 to 6 with SAP EnableNow

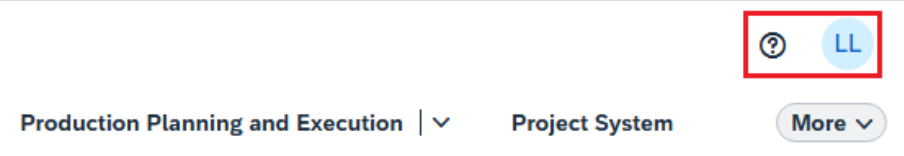

You can complete the following steps directly in the system without using this case study guide (in document form).

SAP EnableNow

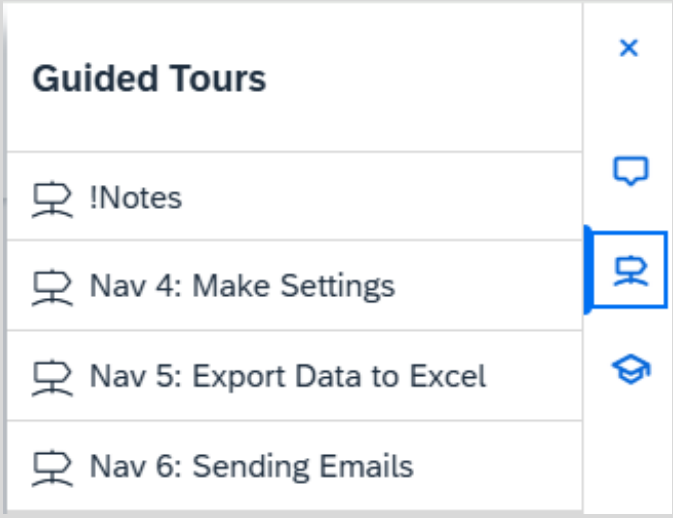

Guided Tours

SAP EnableNow is – as the name suggests – an enablement solution that offers functions for creating and using digital learning and training content. The "Guided Tour" is one of these functions and offers interactive in-app (or in-solution) guidance – in other words, instructions integrated in the Fiori Launchpad.

The guided tours are included in the help section. Pay attention to the two icons at the top right of the screen.

Click on the button to open the EnableNow context menu. There are three symbols shown on the right side of the EnableNow menu. Select the symbol to get an overview of the available Guided Tours.

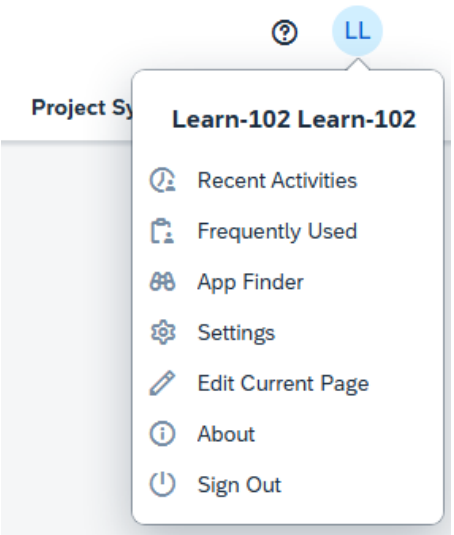

Click on the entry to start the respective tour. If you do not wish to use the guided tours, continue with this case study.

Note The exercises for all modules can also be completed using SAP EnableNow. For more information, you can have a look at the "!Notes" tour.

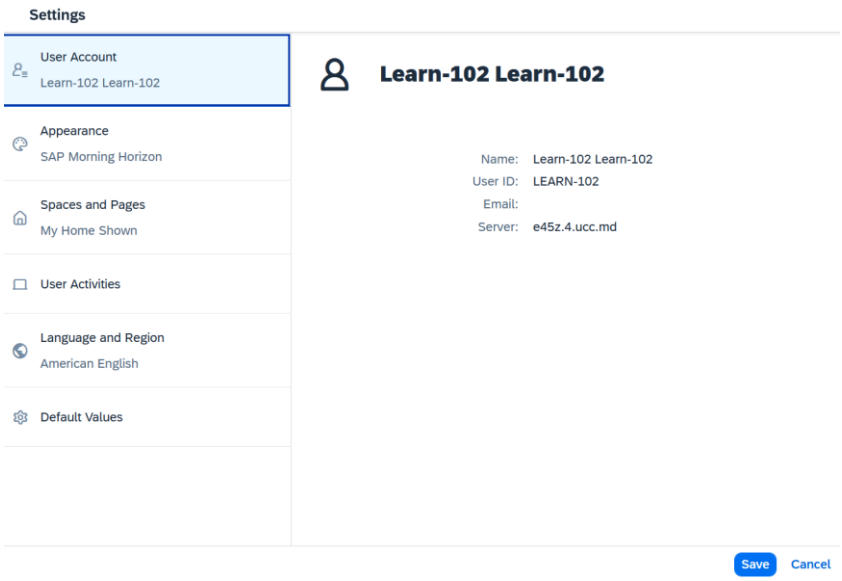

Profile

Click LL to show the settings. The following view appears.

Settings

Click on Settings . The following view appears. Here you can change settings such as language, date format, and default values.

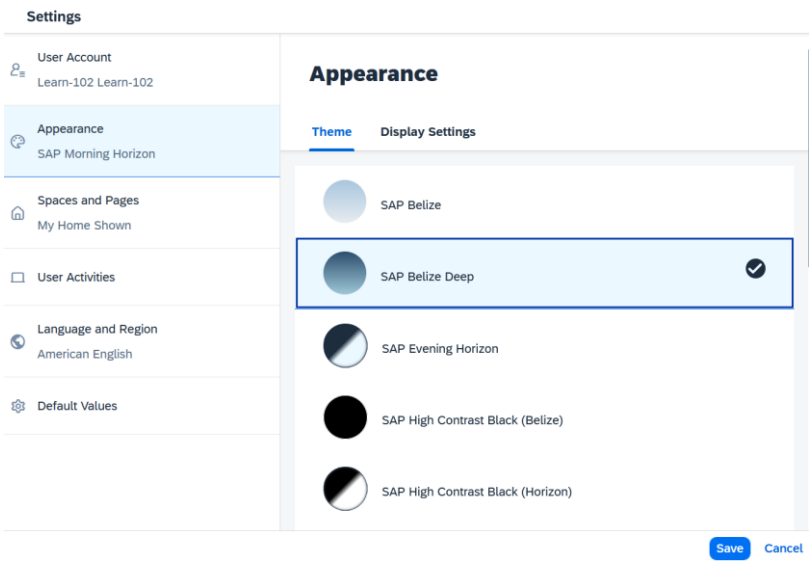

Appearance

Click on the entry Appearance SAP Morning Horizon to see the different designs of the SAP Fiori interface. As you can see, the default theme is SAP Quartz Light.

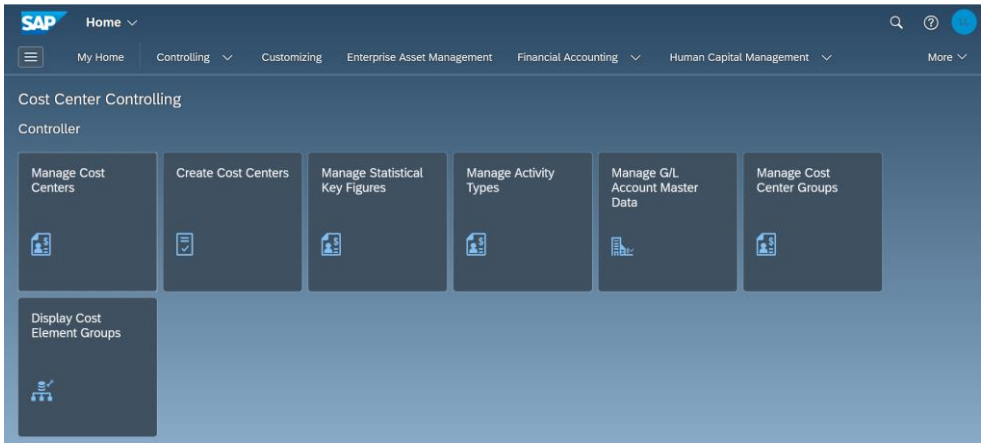

SAP Belize Deep

Click on SAP Belize Deep. You can change the appearance of your interface on the Theme tab page.

Select a new theme and click Save. Your Fiori launchpad should have changed. The following screenshot shows the *SAP Belize Deep* theme.

Save

Now change the setting back to the default theme *SAP Horizon*. Afterwards, stay on the SAP Fiori launchpad for the next task.

Step 5: Export Data to Excel

Task Export data from SAP S/4HANA to an Excel program. **Time** 5 min

You have the option to export data to external applications. Most SAP Fiori apps allow the information to be exported to Microsoft Excel.

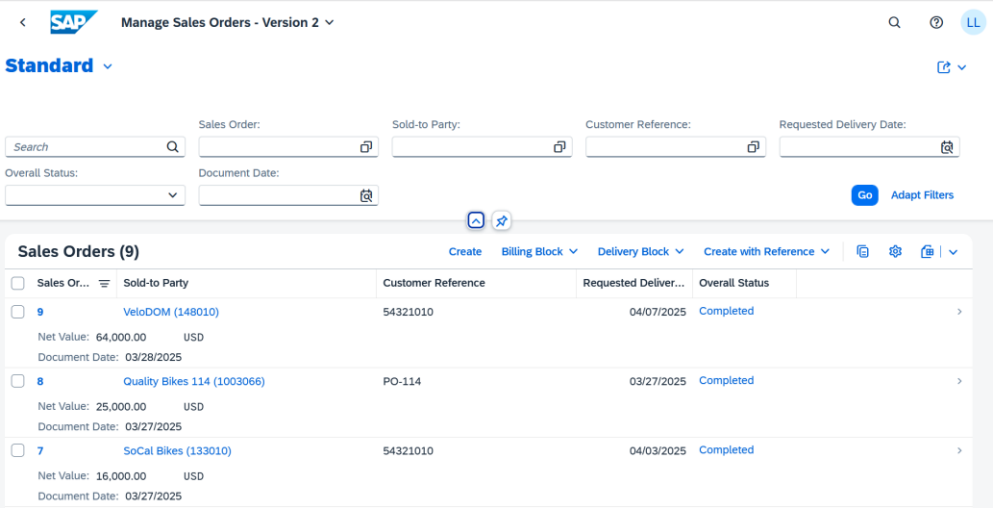

To do so, open the *Manage Sales Orders – Version 2* app in the *Sales and Distribution* space.

Manage Sales Orders – Version 2

Click to Go display the sales orders.

Go

Now download the data using the (Export to Spreadsheet) button .

The system automatically creates and downloads an Excel table. The Excel is displayed either in your download folder or directly in the browser.

Close the Excel and click the Home button to return to the SAP Fiori launchpad.

Home button

Step 6: Sending Emails

Task Learn how to send data by e-mail with SAP S/4HANA. **Time** 5 min

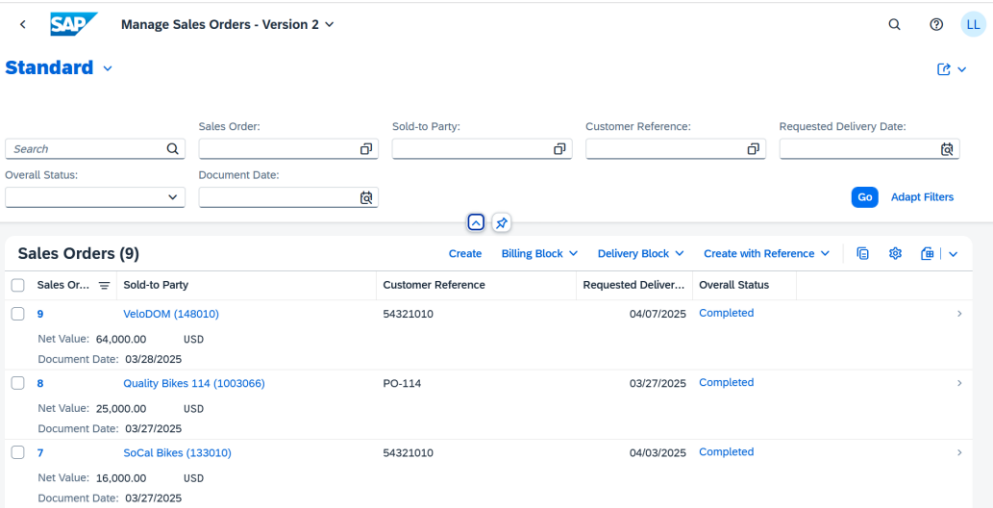

In the *Sales and Distribution* space, open the *Manage Sales Orders – Version 2 app.*

Manage Sales Orders – Version 2

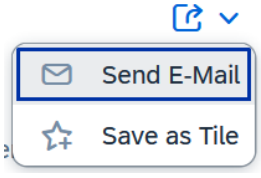

Choose Go without entering any values.

Go

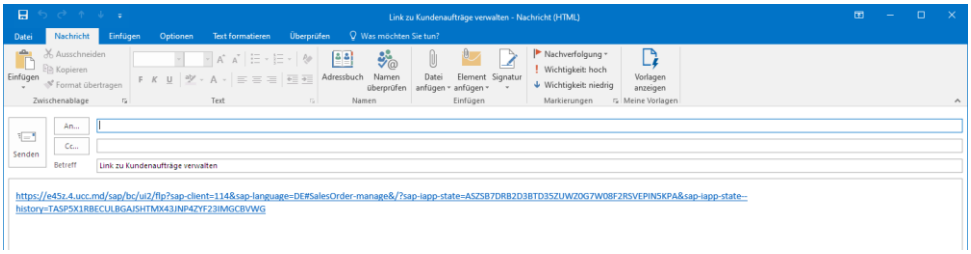

Click the button in the upper right corner.

Click Send E-Mail. If you have installed an e-mail program, a new window opens automatically. The most important information and the link are stored there.

Send E-Mail

Close your email program.

Click the Home button  to return to the SAP Fiori launchpad.

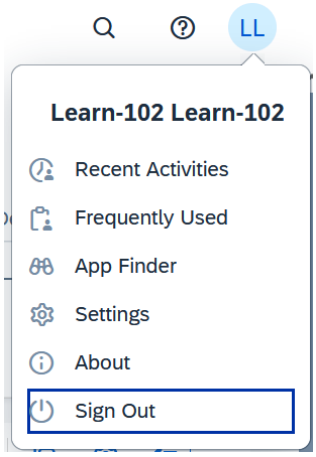

Home button

Step 7: Logoff from SAP S/4HANA

Task Log off from SAP S/4HANA successfully. **Time** 5 min

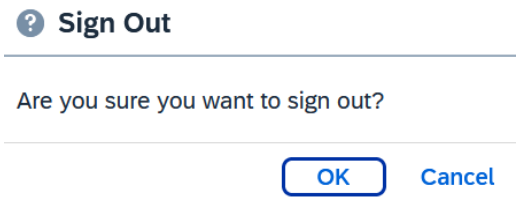

To successfully log off from SAP S/4HANA, you need to click LL in the upper right corner.

Profile
Logout

Then choose **Sign Out.**

Sign out

Confirm the subsequent warning with **OK.** Once you have logged off, you see the logon screen for SAP S/4HANA again.

OK
