Introduction to Artificial Intelligence

Prof. Dr. Hamed Shariat Yazdi, Darmstadt University of Applied Sciences

Assignment: Python exercises

In the Moodle course, answer the quick check questions.

In this lab session, you will practice Python programming. You will be working on your teams of 2 students each.

1. Create a new Pycharm project named IAI_<your surnames> , e.g. IAI_Smith_Mueller . Follow the instructions for project setup in the installation guide.

2. Create a new Python package named “02_Python_exercises”.

3. Download 02_Assignment_Python_Exercises.ipynb from the Moodle course and store it in the new package

4. Implement all functions.

5. Check the correctness of your implementations by running the Jupyter cell (it may be necessary to run it twice). The doctest results are displayed in the Jupyter preview. All tests must be successful.

6. Submit your solution to the Git repository (link via personal email from Gitlab).
