Login help guide

help me login

No problem — let's do this **step by step**, very simply 👍
I'll assume you want to **log in to the UFD server** for your Unix labs.

1️⃣ Open a terminal on your own computer

- **Linux / macOS**: open **Terminal**
- **Windows**: open **PowerShell** (or Windows Terminal)

2️⃣ Connect to the UFD server with SSH

Type this **exact command**, replacing `st123456` with **your own st-username**:

```
bash

ssh st123456@ufd.users.h-da.cloud
```

Then press **Enter**.

3️⃣ First-time login only (important)

If this is your **first time**, you'll see something like:

```
bash

Are you sure you want to continue connecting (yes/no)?
```

Type:

```
text

yes
```

and press **Enter**.

4️⃣ Enter your password

- Type your **st-account password**

- **Nothing will appear while typing** (this is normal)
- Press **Enter**

✅ If correct, you are now logged in and should see a prompt like:

```
text

st123456@ufd:~$
```

That means you're **inside the server**.

5️⃣ Common problems & quick fixes

❌ `ssh: command not found`

➡️ SSH is not installed

- On Windows: make sure you use **PowerShell**, not CMD
- If needed, install **OpenSSH Client**

❌ `Permission denied (password)`

➡️ Wrong username or password

- Check spelling of your **st-username**
- Make sure you use your **normal university password**

❌ Connection timeout / no route to host

➡️ You are **not on VPN**

- Connect to the **h-da VPN**
- Then try again

6️⃣ After login (test)

Run this to confirm you're really logged in:

```
bash

whoami
```

It should print your **st-username**.

If it **still doesn't work**, tell me **exactly what error message you see** (copy & paste it), and I'll fix it with you step by step 💪
