UNIX for Devs h_da - Dungeon game recommendations

DUNGEON GAME

Nice 😎 — so you're looking for a **dungeon-style game that teaches UNIX/Linux commands** while you play?

Here are the best ones made exactly for that purpose:

🧙 1. Terminus

Type: Text-based dungeon adventure
Platform: Web & Terminal
What it teaches:

- Basic UNIX navigation (`cd`, `ls`, `cat`, `grep`, etc.)
- File permissions and pipes
  How to play:
  Visit https://web.mit.edu/mprat/Public/web/Terminus/ — no install needed.

🪓 2. Bastet ("Bastard Tetris")

Type: Terminal Tetris clone

how do i make the terminal show the . files

Good question 👍 — in your terminal (Linux or SSH environment), files or folders starting with a dot (`.`) are *hidden* by default.

To **show hidden files** in your current directory, use:

```bash
ls -a
```

or, for more detailed info (permissions, owner, etc.):

```bash
ls -la
```

Explanation:

- **`-a`** → shows **all** files, including hidden ones (**`.filename`**)
- **`-l`** → shows **long format**, with details like owner, group, permissions, etc.
- You can combine them (**`ls -la`**) for both.

Example output:

```sql
drwxr-xr-x  5 user user 4096 Nov  3 14:52 .
drwxr-xr-x 10 user user 4096 Nov  3 14:50 ..
-rw-r--r--  1 user user   35 Nov  3 14:51 .hiddenfile
-rw-r--r--  1 user user  100 Nov  3 14:50 visiblefile.txt
```

💡 **Bonus:**
If you're using a visual **`tree`** view and also want to include hidden files:

```bash
tree -a
```

Would you like me to explain how to colorize or filter the listing (e.g., only show hidden files)?
