UNIX for Devs h_da - Hidden directory navigation

From the screenshot, you're inside **`~/UFD-X-Karyos/Lab1/Game/entrance`**, and you tried to **`cd chapel`**, but bash says:

```yaml
-bash: cd: chapel: No such file or directory
```

Yet, when you run **`ls -a`**, **`.chapel` is listed** — note the **dot at the start**.
That means it's a **hidden directory**, and its name begins with a dot.

So instead of:

```bash
cd chapel
```

you need to include the dot:

```bash
cd .chapel
```

✅ **Correct command:**

```bash
cd .chapel
```

That should take you into the hidden **`chapel`** directory and let you continue the UNIX dungeon game.
